1. **Artificial Intelligence (AI) is a broad classification of computing that allows a software system to perceive its environment and take action that maximizes its chance of successfully achieving its goals. A goal of AI is to create a software system that is able to adapt or learn something on its own without being explicitly programmed to do it.**

   One approach to AI is a technique that uses existing data to train and test a model, then apply that model to new data to forecast future behaviors, outcomes, and trends. What is this referred to as?

   1 point

   - (●) Machine Learning
   - ( ) Deep Learning

2. **There are three primary AI offerings from Microsoft Azure, each of which are designed for a specific audience and use case. Which of the following is a feature of Azure Cognitive Services?**

   Select all options that apply.

   1 point

   - [x] The ability to add recognition and identification capabilities when analyzing pictures, videos, and other visual content.
   - [ ] The ability to create virtual agents that understand and reply to questions just like a human.
   - [x] The ability to convert speech into text and text into natural-sounding speech. Translate from one language to another and enable speaker verification and recognition.
   - [ ] The ability to train and evaluate predictive models using tools and programming languages familiar to data scientists.

3. **Your organization requires the following Azure Features:**
   Pre-built machine learning models that enable applications to see, hear, speak, understand.

   Which service should they avail of?

   1 point

   - (●) Azure Cognitive Services
   - ( ) Azure Machine Learning
   - ( ) Azure Bot Service

4. **Which of the following provides an automated means of managing the process of building, setting up, and tearing down Virtual Machines?**

   1 point

   - ( ) Azure DevOps Services
   - ( ) GitHub and GitHub Actions
   - (●) Azure DevTest Labs

5. **Your company wants to implement a structured project management and reporting solution in Azure cloud services. Which of the following do you think is the most suitable solution to implement?**

   1 point

   - ( ) Azure DevTest Labs
   - ( ) GitHub and GitHub Actions
   - (●) Azure DevOps Services
