1. What was a common goal that the various innovators we've heard from were trying to achieve? 1 point

- ○ Make sure that their country was the only country with and effective communications infrastructure
- ○ Commercialize their innovations as quickly as possible before anyone came up with a better idea
- ◉ Improve communication between people all across the world
- ○ Protect their ideas using patents so they would have an edge over other application developers

2. What did Robert Caillau see as a major strength of his web editor and browser as opposed to Gopher and ultimately Mosaic? 1 point

- ○ Each time you clicked a link the entire page replaced the previous page in the same window
- ○ It was much easier to install
- ○ It allowed for the development of graphically rich games
- ◉ It opened each element in a new window

3. What does HTTP stand for? 1 point

- ○ Haptic Type Transmit Pattern
- ◉ Hyper Text Transfer Protocol
- ○ Helpful Text Typing Pattern

4. In 1994-1995, Microsoft saw the Internet as such an important piece of the future that they devoted how many people to developing support for the Internet and Web into Windows-95? 1 point

- ◉ 2000
- ○ 10000
- ○ 5000
- ○ 500

5. What best describes Robert Caillau's vision for the World Wide Web? 1 point

- ◉ An interface that would allow academics to collaboratively create, edit, and view documentation, seeing each different type of material (maps, images, text, etc.) in its own particular individual window.
- ○ A system through which academics could discover research relevant to their field
- ○ A tool that would allow people to shop, connect with family and friends, and produce public logs of their daily lives

6. Which of the following best describe how people used the web server developed by Paul Kunz? 1 point

- ○ As a site where you could find and play video material using streaming
- ○ A dating site for busy physicists who worked on their colliders well into the night
- ◉ As an early source of high-quality content
- ○ As a bulletin board system where people discussed programming techniques for NeXT computers

7. What piece of technology had to be created for the web to be successful in 1994? 1 point

- ○ Wearable virtual reality glasses
- ○ Printers that could be used over wireless networks
- ○ Video cameras to allow low-cost video calls around the world
- ◉ A protocol that allowed for the retrieval of documents stored on network-attached servers

8. During what time period was Gopher more popular than the Web? 1 point

- ○ Gopher was never more popular than the web
- ◉ 1990-1993
- ○ 1994-1997
- ○ 1980-1985

9. What is the markup language invented by Tim Berners-Lee and Robert Cailliau to represent web documents. 1 point

- ◉ HTML
- ○ JSON
- ○ XML
- ○ Python

10. What problems were the team trying to develop NCSA Mosaic trying to solve? (check all that apply) 1 point

- ☐ Teaching beginning Computer Science students how to develop web services
- ☐ Creating a browser where all content popped up in a new window
- ☑ Creating a browser that would let people view documents stored on the web
- ☑ Creating a web browser that was easy to install

11. Who did Paul Kunz describe the modern implementation of the internet as being a "win-win" solution for? (Choose all that apply) 1 point

- ☑ The Web is a win for companies because it helps them reaching their target audience more directly
- ☑ The Web is a win for everyday people as it allows them to do complex product comparisons effectively
- ☐ The Web is a win for telephone companies as it gives them a monopoly over long distance communications

12. Which of the following is true? 1 point

- ◉ Packet-switched networks break long messages into short segments that are sent individually
- ○ Packet switched networks were widely used in higher-education before store-and-forward networks were deployed
- ○ Store and forward networks were better at supporting interactive uses of the network like instant messaging
- ○ Early research in packet-switched networks was funded by telephone companies

13. What did Steve Jobs contribute to the creation of the Internet? 1 point

- ○ He invented a new business model for music that ultimate created the need for the world-wide-web and Internet
- ○ While in college, he created the browser that would ultimately be instrumental in making the Internet available to everyone.
- ○ He gave CERN a grant to write the software for the world-wide web.
- ○ He made sure that the first web browser from CERN was very easy to install and use by bundling it into the iPad
- ◉ He was responsible for the company that created the NeXT machine - and on which much of the most earliest development of the Internet was done.

14. Which of the following is **not** true about the CERN high-energy physics lab? 1 point

- ○ CERN has an annual music festival each summer called the Hardronic Festival
- ○ CERN has a need to communicate with scientists working at universities around the world
- ○ Many of the experiments at CERN take 10 or 20 years to build before they can be used to gather data
- ◉ In 1987, they decided that inventing the Web was more important than studying Physics

15. In what year can we clearly say the World Wide Web took off? 1 point

- ○ 1991
- ○ 1998
- ◉ 1994
- ○ 1988

16. What makes Switzerland an ideal location to house a multi-national collaborative research facility like CERN? 1 point

- ◉ Switzerland's longstanding neutrality allows scientists from all over the world to travel there more easily than other nations.
- ○ The beautiful and inspiring scenery
- ○ The flat landscape allows for the construction of large above-ground particle accelerators
- ○ The fantastic food available to feed these brilliant minds

17. What kinds of atmospheres do we consistently see as providing the right support to allow fantastic innovation to happen? 1 point

- ○ Top-down organizations that emphasize specific goals and standards, and refuse to allow their research to be distracted by new discoveries.
- ◉ Organizations that support and encourage creativity in all forms - including music, art, and the pursuit of extensive side projects.
- ○ Organizations that offer financial bonuses to employees that produce innovations that transform society.
- ○ Government-run projects that use statistical approaches to process improvement reducing the average number of defects in each innovation.
