Graded Assignment • 30 min

**Due** Mar 25, 11:59 PM CET

1. Which of the following best describes the advantage of circuit switching? 10 points
   - It provides a reliable communication channel.
   - It efficiently handles bursty traffic.
   - It doesn't waste bandwidth.

2. Choose the one that best describes the disadvantage of circuit switching. 10 points
   - Connection setup delay
   - Best-effort delivery
   - Out-of-order delivery

3. Which of the following best describes the advantage of packet switching? 10 points
   - Data forwarding mechanism is simple.
   - Per-packet overhead is low.
   - It allows multiplexing.

4. Which of the following directly communicates with UE (user equipment) in LTE network? 10 points
   - eNodeB
   - SGW
   - MME
   - PGW

5. Which of the following acts as an interface between the external Internet and LTE network? 10 points
   - eNodeB
   - SGW
   - MME
   - PGW

6. What is the name of the process that connects a moving UE from one eNodeB to the other eNodeB without service disconnection? 10 points
   - Handover
   - Anchoring
   - Cell coverage

7. Which of the following is the name of the process that translates domain names into IP addresses? 10 points
   - IP address allocation
   - DNS resolution
   - Initial attachment

8. Choose the term that represents saving requested web pages for subsequent use. 10 points
   - Proxying
   - Caching
   - Load balancing

9. Which of the following is NOT related to traffic reduction in LTE network? 10 points
   - Handover
   - DNS resolution
   - Proxy forwarding

10. Which of the following is NOT a benefit of using LTE and WiFi together? 10 points
    - It better supports user mobility.
    - It provides more bandwidth hence, better throughput.
    - It reduces operating costs.
