Due Apr 10, 11:59 PM CEST

1. **Your company is considering moving to Azure cloud services; however, management wants assurances. Features such as Security Reporting, similar to their existing on-premises SIEM solution need to be available. Which of the following features can be implemented that will provide a cloud-based SIEM solution?** 1 point

   - Configure a secure VM and store the Passwords and certificates in a shared folder.
   - Implement Azure Key Vault.
   - Implement Azure Sentinel.

2. **Tailwind Traders has recently migrated to Azure cloud services. Azure includes various built-in reporting and monitoring tools. What is the simplest tool to use to view groups of related security recommendations showing the percentage of security controls that the company currently satisfies?** 1 point

   - Secure Score
   - Azure Sentinel
   - Azure Key Vault

3. **Many Azure services include built-in security features however Azure also has specific tools to assist with securing your environment. Which of the following would be the simplest way to centrally manage your passwords and certificates in a single, central location?** 1 point

   - Azure Security Center
   - Azure Sentinel
   - Azure Key Vault

4. **Having recently migrated to Azure cloud services, you need to implement a solution that will allow the monitoring of incoming and outgoing network traffic and, determine whether to allow or block specific traffic based on a defined set of security rules. Which of the following services would be most suitable to solve this problem?** 1 point

   - DDoS protection
   - Azure Firewall
   - Network Security Groups

5. **Which of the following services allows for the configuration of application rules that define fully qualified domain names (FQDNs) that can be accessed from a subnet?** 1 point

   - Azure Firewall
   - DDoS Protection
   - Network Security Groups
