← Back **Introduction to Security, Access Control, and Software Development Security Quiz**
Graded Assignment • 30 min

Due Mar 16, 11:59 PM CET

1. Information security can best be defined as: 1 point

- (●) Collection of technologies, standards polices and management practices that are applied to information to keep it secure
- ( ) Encrypting data so that it can only authorized users can read it
- ( ) Stopping hackers from getting data
- ( ) Restricting access to authorized users only

2. Without information, businesses could still function. 1 point

- ( ) True
- (●) False

3. Valuing and protecting information are crucial tasks for organizations. 1 point

- (●) True
- ( ) False

4. The implementation of Information security management is the same for all organizations. 1 point

- ( ) True
- (●) False

5. Access control is the process of trying to determine a user's identity. 1 point

- ( ) True
- (●) False

6. Access controls can be defined as: 1 point

- (●) Having the ability to do something with a computer resource.
- ( ) Having the permission to use a resource.
- ( ) Proving a user's identity.

7. Authorization can be defined as: 1 point

- (●) Having permission to use a resource.
- ( ) Having the ability to do something with a resource.
- ( ) Proving a user's identity.

8. Authentication can be defined as: 1 point

- ( ) Having the ability to do something with a resource.
- (●) Proving a user's identity.
- ( ) Having permission to use a resource.

9. Accountability can be defined as: 1 point

- (●) Tracking a user's actions while in a system.
- ( ) Having permission to use a resource.
- ( ) Firing a user who does the wrong thing.

10. Confidentiality can be defined as: 1 point

- (●) Ensuring that information is not disclosed to unauthorized users.
- ( ) Ensuring that information has not been improperly modified or destroyed.
- ( ) Ensuring that information is accessible.

11. Integrity can be defined as: 1 point

- (●) Ensuring that information has not been improperly modified or destroyed.
- ( ) Ensuring that information is not disclosed to unauthorized users.
- ( ) Ensuring that information is accessible.

12. Availability can be defined as: 1 point

- ( ) Ensuring that information is not disclosed to unauthorized users.
- ( ) Ensuring that information has not been improperly modified or destroyed.
- (●) Ensuring that information is accessible.

13. Access, authentication, and authorization all mean the same thing. 1 point

- ( ) True
- (●) False

14. Software security principles should be applied throughout the software development lifecycle. 1 point

- (●) True
- ( ) False
