← Back **Course Certificate Final Exam**
Cybersecurity Domain, Week 1

Due Mar 31, 11:59 PM UT

1. Information security can best be defined as: 1 point
- Sleeping
  hackers from getting data
- Encrypting
  data so that it can only authorized users can read it
- Restricting
  access to authorized users only
- Collection
  of strategies, standards,policies and management practices that are applied to information to keep it secure

2. Without 1 point
information,businesses could still function.
- True
- False

3. Valuing 1 point
and protecting information are crucial tasks for organizations.
- True
- False

4. The 1 point
implementation of information security management is the same for all organizations.
- True
- False

5. Access 1 point
control is the process of trying to determine a user's identity.
- True
- False

6. Access controls 1 point
can be defined as:
- Proving
  a user's identity
- Having
  the permission to use a resource
- Having
  the ability to do something with a computer resource

7. Authentication 1 point
can be defined as:
- Proving
  a user's identity
- Having
  the ability to do something with a resource
- Having
  permission to use a resource

8. Authorization 1 point
can be defined as:
- Having
  the ability to do something with a resource
- Having
  permission to use a resource
- Proving
  a user's identity

9. Accountability can be defined as: 1 point
- Tracking a user's actions while in a system
- Having permission to use a resource
- Firing a user who does the wrong thing

10. Confidentiality 1 point
can be defined as:
- Ensuring
  that information is accessible
- Ensuring
  that information has not been improperly modified or destroyed
- Ensuring
  that information is not disclosed to unauthorized users.

11. Integrity 1 point
can be defined as:
- Ensuring
  that information is not disclosed to unauthorized users.
- Ensuring
  that information has not been improperly modified or destroyed
- Ensuring
  that information is accessible

12. Availability 1 point
can be defined as:
- Ensuring
  that information is accessible
- Ensuring
  that information has not been improperly modified or destroyed
- Ensuring
  that information is not disclosed to unauthorized users.

13. Access, 1 point
authentication, and authorization all mean the same thing
- True
- False

14. Software 1 point
security principles should be applied throughout the software development lifecycle
- True
- False

15. Organizations 1 point
should have plans in place to deal with disruptive events
- True
- False

16. Business 1 point
continuity plans and disaster recovery plans are the same thing
- True
- False

17. Used to 1 point
identify operational and financial impacts resulting from a disruption of business operations
- BIA
- LTP
- RP
- SOP

18. According 1 point
to DHM, the four phases of emergency management are
- Mitigation, preparedness, response and recovery
- Mitigation,
  reaction, recovery, and response
- Mitigation, response, intervention, and planning
- Mitigation,
  preparedness, quick action, and response

19. The act 1 point
of setting up a plan to ensure the survival of an organization
- Business
  continuity planning
- Incident
  response management
- Onsite
  backup and storage recovery
- Disaster
  recovery implementation

20. A hot 1 point
site can be described as:
- A
  building already equipped with processing capability and other services
- A
  building for housing processors that can be easily adapted for use
- An
  agreement for two organizations to back each other up

21. A cold 1 point
site can be described as:
- A
  building for housing processors that can be easily adapted for use
- An
  agreement for two organizations to back each other up
- A
  building already equipped with processing capability and other services

22. A 1 point
reciprocal agreement can be described as:
- An
  agreement for two organizations to back each other up
- A
  building already equipped with processing capability and other services
- A
  building for housing processors that can be easily adapted for use

23. Contingency 1 point
plans should never be tested, since they most likely won't ever be used
- True
- False

24. Contingency 1 point
plans should be written and periodically updated
- True
- False

25. Encryption 1 point
is used to stop unauthorized people from reading information
- True
- False

26. Cryptographic 1 point
system in which both sender and receiver share a common key.
- Asymmetric
- Symmetric

27. Which 1 point
cryptographic system is faster, in relative terms
- Symmetric
- Asymmetric

28. Which 1 point
cryptographic system is faster, in relative terms?
- Symmetric
- Asymmetric

29. Type of 1 point
cryptographic system that combines symmetric and asymmetric features
- DES
- Stream
- Hybrid
- DES

30. Prevents 1 point
an individual from claiming he/she did not send a message
- Asymmetric
  cryptography
- Message
  digest
- Symmetric cryptography
- Electronic
  signature

31. Process 1 point
by which the value of an organization's information assets are assessed and protected
- Vulnerability
  assessment
- Risk
  management
- Threat analysis
- Cryptography
- Information
  security management

32. Building 1 point
an information security management system is done by:
- Systematic
  assessment of systems, technology and media used
- Approval
  of the costs of security breaches
- Development
  and deployment of countermeasures to threats
- All of
  the above

33. A 1 point
"one fits all" approach to information security management is the best course of action for all businesses.
- True
- False

34. The 1 point
role of information security governance is to ensure that all technical controls are put into place, regardless of cost
- True
- False

35. Information 1 point
security is viewed as a business support function
- True
- False

36. Comparing 1 point
tangible vs. intangible costs in projects is easy to do
- True
- False

37. Security 1 point
policies should not be reviewed by corporate counsel before implementation
- True
- False

38. NIST 1 point
and ISO have published standards for use by information security professionals
- True
- False

39. Protects 1 point
records and information maintained by U.S. government agencies
- HIPAA
- SLDB
- Federal
  Privacy Act of 1974
- PCI DSS

40. Guards 1 point
protected health information from unauthorized use or disclosure
- SLDB
- HIPAA
- Federal
  Privacy Act of 1974
- PCI DSS

41. Ensures 1 point
better protection of credit card holder data.
- SLDB
- PCI DSS
- Federal
  Privacy Act of 1974
- HIPAA

42. Separation 1 point
of duties prevents one person from having total control of security measures
- True
- False

43. Audit 1 point
and monitoring functions allow for the identification of security events
- True
- False

44. Examples 1 point
of threats to the physical environment include:
- Emergencies
- Service
  interruptions
- Sabotage
- All of
  the above

45. Consideration 1 point
of things like locks and security guards fall outside the physical environment domain
- True
- False

46. The concept which holds that modification of 1 point
data is allowed only by authorized users
- Integrity
- Confidentiality
- Availability
- None of the above

47. The concept which holds that data should only be 1 point
accessed by those who have a legitimate right to do so
- Integrity
- Confidentiality
- Availability
- None of the above

48. The concept which holds that data should be 1 point
usable by legitimate users, when they need to do so
- Availability
- Confidentiality
- Integrity
- None of the above

49. Type of attack described as the interception of 1 point
messages without modification
- Active
- Passive

50. Type of attack described as one in which an 1 point
unauthorized change is attempted
- Active
- Passive
- Sniffing
- Shoulder surfing
